TAKING CARE OF OUR PLANET

The Hotel Cascais Miragem has taken some measures for the environmental conservation, reducing our consumption of energy and water, meeting the saving of resources that our planet needs to achieve.

The goal objective of this program is to reduce the contamination generated by the Hotel's operations, contributing to the environment, thus reducing the consumption of electricity, water, gas and trash.

The Hotel Cascais Miragem is carrying out several actions to contribute to the environment, such as:

The use of double glazing and double walls for better thermal insulation, thermal solar panels for water heating in conjunction with high-efficiency condensing boilers, WCs equipped with double water discharge, thus, contributing to a 30% reduction in water consumption, as well as flow reducers in washbasins and bidets.

Rooms are equipped with air conditioning systems that allow energy reduction whenever a door or window is opened, the pavement on the balconies is protected to avoid solar heating and 15% of the hotel rooms have wooden floors.

Waste reduction and recycling program for amenities, paper, glass, plastics, metals, oils and fats; elimination of single-use plastics, LED lighting and use of rainwater for watering gardens, among other solutions.

Under study is the project for the implementation of a large area of photovoltaic panels with a view to near energy self-sufficiency.

We are proud of all the goals achieved to date and we also invite our customers to join us in this initiative for the protection of our planet, as we know that...

Every little gesture makes a difference!
